Uniswap Overview

Uniswap is a leading decentralized exchange (DEX) built on the Ethereum blockchain. It allows users to swap ERC-20 tokens directly from their wallets without the need for intermediaries. Using an automated market maker (AMM) model, Uniswap relies on liquidity pools rather than traditional order books, enabling fast and permissionless trading.

Uniswap is known for its transparency, user control, and open access to a wide range of tokens — including many newly launched ones. It has become a cornerstone of the DeFi ecosystem due to its ease of use and decentralized nature.

For more insights and tools related to Uniswap, including real-time data and interface access, visit this Uniswap resource.
